Education

University of Parma

MASTER'S DEGREE IN COMPUTER SCIENCE (EXPECTED)

Parma, Italy

Sep. 2024 - Jul. 2026

University of Parma

BACHELOR'S DEGREE IN COMPUTER SCIENCE

Parma, Italy

Sep. 2021 - Jul. 2024

Grade: 110/110 *cum laude*

Title: "Valutazione sperimentale sull'individuazione automatica di errori di programmazione nel codice generato da LLM"

Supervisor: Prof. Enea Zaffanella

Co-supervisor: Prof. Vincenzo Arceri

Keywords: *Static Analysis, AI, LLM, Software Verification and Validation*

Interests

My primary academic interests lie in Software Verification, particularly in Static Analysis by Abstract Interpretation. During my internship, I worked on integrating the PPLite library into the Mopsa static analyzer, further enhancing my practical experience and technical skills in this field. My bachelor's thesis focused on evaluating the quality of source code generated by Large Language Models (LLMs) through static analysis.

Experiences

University of Parma

INTERNSHIP

Parma, Italy

Oct. 2023 - Jan. 2024

- Examined the Mopsa static analyzer (<https://mopsa.lip6.fr/>) through a series of benchmarks (coreutils-benchmarks, juliet-benchmarks)
- Integrated the PPLite library (<https://github.com/ezaffanella/PPLite>) into the framework
- Created a docker container to automate the installation ([manueldiagostino/mopsa:pplite](#))

Tools and Software

Deep Neural Network Library

From May 2024

A flexible C++ library for building, training, and using deep neural networks. Modular, easy-to-use, and high-performance. The library supports various neural network architectures, efficient training tools, and robust inference methods (<https://github.com/unipr-org/deep-neural-network>).

Grants

Research participant, "LLMs Meet Static Analysis: improving quality and reliability of AI-generated code"

ISCRA PROJECT (CLASS C), CINECA

From Jan. 2024

Principal Investigator: Prof. Vincenzo Arceri. The goal of the project is to conduct an extensive quality and safety evaluation of the code generated with some of the most popular and open-source LLMs employing static analyzers, that can detect vulnerabilities and run-time errors statically, without executing the code. Once this information is available, it will be included in the code-generation task, to guide the LLM itself to produce a more precise and safe output, in which static analysis is somehow introduced in the pipeline of the code-generation task.

Conferences, workshops and school participations

2024 **Participant**, CSV 2024, 3rd Challenges of Software Verification Symposium

Venice, Italy
